    b. Response

Methods

1. Register

Register the user to the portal

Request

Method	URL
POST	api/register

Type	Params	Values
BODY	email	string
BODY	password	string
BODY	role	string
BODY	username	string
BODY	mobile	number
BODY	college	string
BODY	department	string

email
email denotes the email of the user.

password
password used to authenticate the user.

role
role denotes the role of the user such as Student,Admin.

username (optional for Admin)
username denotes the name of the user.

mobile (optional for Admin)
mobile denotes the contact number of the user.

college (optional for Admin)
college denotes the college name where the user is studying.

department (optional for Admin)
department denotes the department of the user.

Response

Status	Response

201	**Response for admin registration:**
	{
	"message": "User registered successfully**",**
	"user": {
	"email": "shanu@gmail.com",
	"password":

403	**Response for students:**

	{
	"message": "Admin role required for this action!"
	}

500	{“**message**”:”Server error”}

4. Create Course

Create course only by admin

Request

Method	**URL**
POST	api/course

Type	**Params**	**Values**
HEADERS	Authorization	token
BODY	title	string
BODY	courseManager	string
BODY	managerMail	string

Authorization
token which is generated after successful login.

title
The title of the course.

courseManager
courseManager denotes the name of the course manager who is going to handle the course.

managerMail
managerMail denotes the email of the course manager.

Response

Status	Response

201	{
	"message": "Course created successfully",
	"course": {
	"title": "NodeJS",
	"courseManager": "karthikeyan",
	"managerMail": "karthi@gmail.com",
